

WHAT IS CLAIMED IS:

1. A method for producing an article, comprising:

a supply step of supplying a first web;

5 a first bonding step of bonding the first web and an elastic together;

a placement step of placing a second web so as to sandwich the elastic between the first web and the second web; and

10 a second bonding step of bonding the first web, the elastic and the second web together at a plurality of locations.

2. A method for producing an article according to claim

1, the first bonding step comprising the steps of:

stretching the elastic; and

15 cutting the stretched elastic into pieces of a predetermined length.

3. A method for producing an article according to claim

2, wherein the first bonding step comprises a step of applying

20 an adhesive on the first web for temporarily tacking the elastic on the first web.

4. A method for producing an article according to claim

2, wherein the first bonding step comprises a step of applying

25 an adhesive on the elastic for temporarily tacking the elastic on the first web.

5. A method for producing an article according to claim 1, wherein the second bonding step is performed by passing the first web, the elastic and the second web between an embossing roll and an anvil roll.

6. A method for producing an article according to claim 1, further comprising the steps of:

cutting a combined web produced in the second bonding step into a first combined web and a second combined web;

spacing apart the first combined web and the second combined web from each other; and

placing an absorbent so as to bridge between the first combined web and the second combined web, which have been spaced apart from each other.

7. A method for producing an article according to claim 6, further comprising a step of making a hole for trimming a leg hole.

8. A method for producing an article, comprising:

a supply step of supplying a first web;

a first bonding step of bonding the first web with first and second elastics;

a placing step of placing a second web so that the first elastic is sandwiched between the first web and the second web

and placing a third web so that the second elastic is sandwiched between the first web and the third web; and

a second bonding step of bonding the first web, the first elastic and the second web together at a plurality of locations and bonding the first web, the second elastic and the third web together at a plurality of locations.

9. A method for producing an article according to claim 8, further comprising a step of placing an absorbent.

10. A method for producing an article, comprising:
a supply step of supplying a first web;
a first bonding step of bonding the first web with first and second elastics;

a placement step of placing a second web so that the first elastic and the second elastic are sandwiched between the first web and the second web; and

a second bonding step of bonding the first web, the first and second elastics and the second web together at a plurality of locations.

11. A method for producing an article according to claim 10, further comprising a step of placing an absorbent.

12. A method for producing an article, comprising the steps of:

supplying a first web;

supplying first and second elastics being stretched;

cutting the first and second elastics into a plurality
of first stretched sheets and a plurality of second stretched
5 sheets;

placing the first stretched sheets at a predetermined
interval in a flow direction of the first web along one edge of
the first web;

placing the second stretched sheets at a predetermined
10 interval in a flow direction of the first web along the other edge
of the first web;

placing a second web so as to cover the first and second
stretched sheets;

thermally bonding the first and second stretched sheets
15 between the first web and the second web to produce a laminate;

placing one end of an absorbent between two adjacent ones
of the first stretched sheets;

placing the other end of the absorbent between two adjacent
ones of the second stretched sheets.

20

13. A method for producing a worn article, comprising the
steps of:

supplying a first web;

supplying a stretched elastic;

25 cutting the elastic into a plurality of stretched sheets;

placing the sheets at a predetermined interval in a flow

direction of the first web along a longitudinal centerline of the first web;

placing a second web so as to cover the sheets;

thermally bonding the first web, the sheets and the second web together to produce a laminate;

cutting the laminate, including the sheets therein, into two waist portions each being a continuous portion;

spacing apart the two waist portions from each other in a width direction of the first web;

placing one end of an absorbent on one of the waist portions; and

placing the other end of the absorbent on the other one of the waist portions.
